EXECUTIVE SUMMARY

Motivated MERN Stack Developer with hands-on experience in building full-stack web applications using MERN stack. Skilled in developing responsive user interfaces, RESTful APIs using modern web technologies.

EDUCATION

EGSP Engineering College
B.Tech(CSBS)

09/2023 – 05/2027
Nagapattinam

Thanthai Periyar GOVT.HR SEC School
HSC

07/2021 – 04/2023
Karaikal

Karaikal ammaiyar HR.SEC School
SSLC

06/2020 – 04/2021
Karaikal

SKILLS

Technical Skills — MongoDB, Express.js, React, Node.js, HTML, CSS, JavaScript, Bootstrap, REST API Integration, Authentication, RBAC, Mongoose, Responsive web design.

Soft Skills — Adaptability, Communication, Time Management, Quick Learner, Problem Solving

TOOLS

VS Code, Git, GitHub, Postman, MongoDB Compass, Vel, render, AWS EC2, Github actions, n8n.

CERTIFICATES

TCS ion — Young Professional Soft Skills , TCS iON

EduSkills — Completed Machine Learning Virtual Internship – EduSkills

NPTEL — Completed Cloud computing with 58%

NPTEL — Human Computer Interaction (In English) with 98%

NPTEL — Organizational Behaviour: Individual Dynamics in Organization with 81%

INTERNSHIP

Code Alpha

I completed my virtual internship in Frontend Development at CodeAlpha.

PROJECTS

Portfolio

Developed a fully responsive personal portfolio using React (Vite) with a modern dark UI and glassmorphism design. Implemented smooth animations using Framer Motion and structured navigation with React Router DOM. Integrated REST APIs using Axios with a Node.js and Express backend, connected to MongoDB via Mongoose. Deployed seamlessly on Vercel, ensuring performance, scalability, and optimized user experience.

Furniture Store Website

Designed and developed a MERN Stack-based furniture website to showcase various furniture products and categories. Created a modern user interface using Bootstrap and glassmorphism design, ensuring a responsive and visually appealing layout. Implemented features for product browsing and structured product display, improving user navigation and overall experience.

StockZen – Inventory Management System

Built a full-stack inventory management system using React (Vite) with a modern dark UI and glassmorphism design for an intuitive user experience. Implemented dynamic dashboards, real-time stock updates, and smooth UI interactions using Framer Motion. Developed RESTful APIs with Node.js and Express.js, integrated MongoDB via Mongoose for efficient data handling, and used Axios for seamless frontend-backend communication. Enabled features like product tracking, stock in/out management, and automated updates. Deployed on Vercel with optimized performance and scalability.

AI Agent Chat System with Memory & Gmail Integration (n8n workflow)

Designed and deployed a no-code/low-code AI agent using n8n to automate conversational workflows. The agent integrated an OpenAI Chat Model with a Simple Memory node to retain conversation context across sessions. Built a Gmail integration that allowed users to send emails directly from the chat interface triggered by specific intents. The workflow received incoming messages, processed them through the AI model with memory retrieval, and executed actions like sending emails via Gmail API — all orchestrated visually in n8n.

Booking Platform

Built a responsive full-stack booking platform using MongoDB, Express.js, React.js, Node.js, and Vite. Implemented OTP-based authentication for secure user registration and login. Developed Role-Based Access Control (RBAC) for Participants, Organisers, and Admins. Enabled Participants to book slots, Organisers to host sessions, and Admins to manage platform operations. Focused on scalable architecture, secure routing, and seamless user experience.

EV Charging Station Booking Platform

Built a full-stack MERN application for discovering and booking EV charging slots across Tamil Nadu. Implemented OTP authentication, profile management with Cloudinary uploads, and a personal booking dashboard. Added station search, availability filters, and Google Maps integration with custom markers and turn-by-turn navigation. Designed a booking engine with 24 hourly slots, instant cancellation, and double-booking prevention using MongoDB unique indexes. Integrated Socket.io  for real-time slot availability updates. Built an admin panel with station CRUD, KPI dashboards, and peak-hours booking analytics.

DECLARATION

The information in this resume is complete and correct to the best of my ability. I am open to verification of any claims made above.
